PROFESSIONAL SUMMARY

Data Analyst with a proven record of building strategic Power BI dashboards, automated ETL pipelines in Python, and tuned queries across PostgreSQL and SQL Server. Worked at the Brazilian National Water Agency (ANA) delivering executive indicators for complex water systems and automating routines that cut report consolidation time. Graduate student in Data Science and Big Data Analytics (IESB). Focused on turning raw data into business decisions and actionable metrics.

PROFESSIONAL EXPERIENCE

Brazilian National Water Agency (ANA) 2025
Data Analyst

- Built 6 strategic Power BI dashboards with advanced DAX and dimensional modeling (star schema) covering critical basin and reservoir indicators for management teams and decision makers.
- Automated extraction, transformation and load (ETL) pipelines in Python (pandas/requests) and SQL, cutting weekly water-data consolidation effort by roughly 70%.
- Optimized queries and views across relational databases (PostgreSQL and SQL Server), bringing report response times from minutes down to seconds.
- Translated requirements from environmental analysts and public managers into performance indicators (KPIs) for the agency's operational teams.

Data & Analytics Projects and Consulting 2024 – Present
Data & BI Analyst (freelance)

- Built extraction and web scraping pipelines in Python wired into relational databases, cleaning more than 50,000 records for comparative analysis.
- Implemented a semantic search and document analysis layer in Python with embeddings (RAG), shortening queries over unstructured text bases.
- Delivered analytical reports joining heterogeneous sources (REST APIs, Excel, JSON and SQL databases) with automatic refresh through scheduled pipelines.

Global Hitss 2024 – 2025
IT Operations & Monitoring Analyst (L1)

- Monitored infrastructure, database and cloud server health (Microsoft Azure), catching anomalies before corporate service outages.
- Documented and managed incidents following ITIL practices, holding SLA compliance above 95% for more than 500 corporate users.
- Produced ticket volume and recurring-issue trend reports for technical leadership.

EDUCATION

- M.S. in Data Science and Big Data Analytics — IESB University Center (in progress)
- B.S. in Systems Analysis and Development — IESB University Center

TECHNICAL SKILLS

Business Intelligence: Power BI, Advanced DAX, Power Query (M), Dimensional modeling (star schema), Executive dashboards, Business KPIs

Databases & Data Handling: Advanced SQL, PostgreSQL, SQL Server, SQLite, Optimized views and queries, Relational modeling

Data Engineering: Python (pandas, numpy, requests), ETL pipelines, Web scraping, REST API integration, Routine automation

Environment: Git/GitHub, Docker, Linux, Advanced Excel, Agile methods
